

Amendments to the Claims:

LISTING OF CLAIMS

1. (currently amended) A nozzle comprising an air outlet aperture across which there are situated at least ~~one~~ two electrically isolated thermal-capacitance element elements configured to moderate air temperature of air exhausted through the nozzle by absorption, retention and re-radiation of thermal energy contained in the air exhausted through the nozzle, wherein said elements are disposed in a parallel spaced-apart interrelationship.
2. (original) The nozzle of claim 1 wherein the element has opposed ends and the outlet aperture has slots therein into each of which a respective said opposed end is received.
3. (cancelled)
4. (original) The nozzle of claim 1 wherein the element is made of a material selected from the group consisting of ceramic, metal and glass.
5. (original) The nozzle of claim 1 being formed integrally with a hairdryer body.
6. (original) The nozzle of claim 1 being formed as an attachment for a hairdryer body.
7. (previously presented) The nozzle of claim 5 having comb teeth extending from the outlet aperture.
8. (previously presented) The nozzle of claim 6 having comb teeth extending from the outlet aperture.

9. (currently amended) A nozzle comprising an air outlet aperture across which there are situated at least ~~one~~ two electrically isolated thermal-capacitance element elements configured to moderate air temperature of air exhausted through the nozzle by absorption, retention and re-radiation of thermal energy contained in the air exhausted through the nozzle, said nozzle defining a central axis through said outlet aperture and comb teeth projecting from said nozzle in a generally parallel orientation to said central axis ,wherein said elements are disposed in a parallel spaced-apart interrelationship.

10. (previously presented) The nozzle of claim 1 comprising a pair of said elements disposed in generally parallel relationship to said central axis.

11. (previously presented) The nozzle of claim 9 being formed integrally with a hair body dryer.

12. (previously presented) The nozzle of claim 9 being formed as an attachment for a hair dryer body.
